shallow stormwater detention

rainwater harvesting

stormwater detention

greywater recycling

Azuratec StormTank provides a flexible shallow draft solution for stormwater detention without the expense, hassle and danger of heavy lifting or deep excavation equipment.

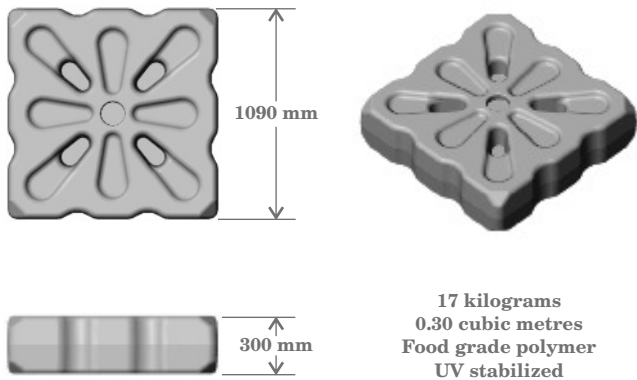

StormTank is a pit-to-pit stormwater detention system using modular, light weight tanks. As standard, each system is installed complete with tanks, interconnections and inlet and outlet pits with built in trash grates. With an exceptionally shallow draft and an invert level of as little as 400mm below the finished surface, StormTank systems are ideal for sites with minimal fall to point of discharge reducing the need for pumps.

Features and Benefits

- shallow draft and minimal invert level
- ideal for relatively flat sites
- uses modular, lightweight polymer tanks
- can be installed by hand
- no heavy excavation or lifting equipment req'd
- compliant with relevant building regulations
- suitable for installation beneath driveways

Technical

StormTanks are designed to fit within a waffle slab, raft slab or under driveway, patio or paved surfaces.

Installation

Step 1

Heights are checked, fall is established and the site is levelled to suit the tank system.

Step 2

StormTanks are connected together in position with access ports installed as required.

Step 3

Grated pits are installed and connected into the StormTank system, down pipes and discharge point.

Step 4

Concrete is poured to the required depth allowing for completion of the final patio, driveway or paving.

Azuratec provide fast and simple residential water systems to suit modern building practices.

Our products include rainwater harvesting, stormwater detention and greywater recycling. We take responsibility for installation to ensure quality and save our customers from the usual hassle and delay.

We support our customers with professional design and engineering services to take the stress out of achieving regulatory compliance.
